

THE ALL NEW

SIDE SWIPER™

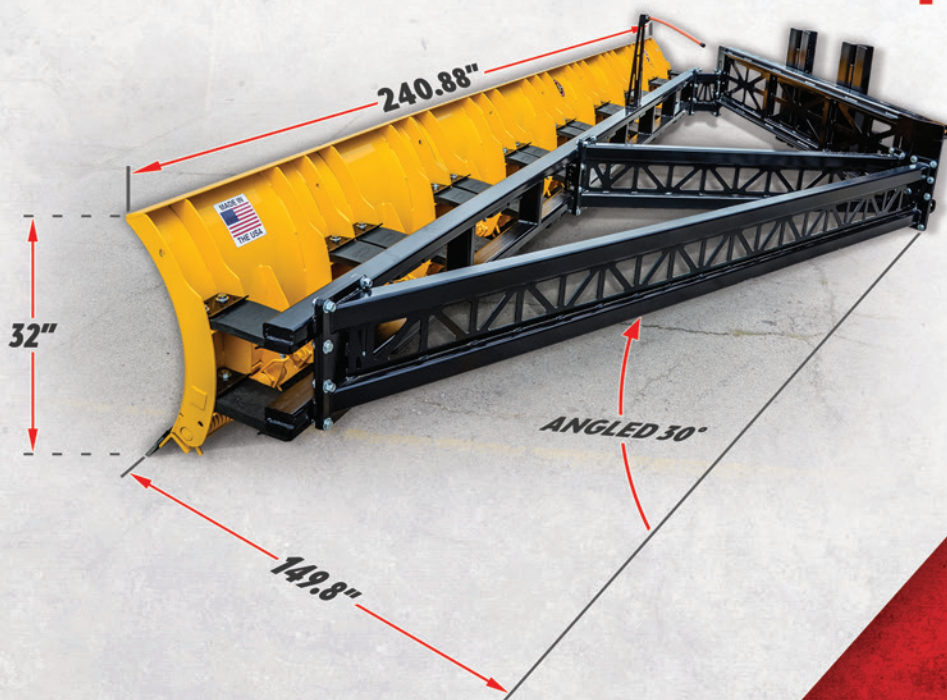

THE **ULTIMATE WEAPON** FOR DISTRIBUTION CENTERS

In a changing economy, it is no surprise that less shopping malls are being built and more distribution centers are going up to accommodate spikes in online shopping and ordering. Making sure that snow contractors have the right tools in their arsenal to combat these high demand facilities is crucial! That tool for these high traffic sites is, **The SideSwiper™- Arctic Sectional Offset Plow**, the most efficient and effective way to clear snow, ice and hardpack to the bare pavement from underneath Semi Trailers and around their 5th wheel kingpin.

The SideSwiper™ plow possesses many of the great features that are found on the famous Arctic Sectional Sno-Pusher™ and Sno-Plow™. It has a full twenty feet of length, offset and with a low profile, so it can clear the kingpin on semi-tractor trailers. Built for and used by Arctic's own massive snow fleet, this is an indispensable tool in your arsenal at any loading dock this winter. When downtime is unacceptable, and speed and efficiency are absolutely required, this is the plow you want, with the patented technology that only Arctic can provide.

Other manufactures have their own version of an offset plow, but they cannot compete with the Arctic Sectional's ability to conform to the pavement and peel up the hard pack snow that is generated by the heavy vehicles on these sites.
